Author index for papers in Volume 35

Pages are numbered consecutively through the volume: 1–304, January/March; 305–456, May; 457–566, July; and 567–862, September/November.

Afzali, A.
489 see Cohen, M. S.

Afzali, A.
512 see Cohen, M. S.

Ammann, E. M., R. R. Berbec, G. Bozman, M. Faix, G. A. Goldrian, J. A. Pershing, Jr., J. Ruvolo-Chong, and F. Scholz
653 *The Parallel Processing Compute Server*

Aono, M.
45 see Doi, A.

Appino, P. A.
26 see Farrell, E. J.

Arasmith, C.
140 see Arnold, R. F.

Arnold, R. F., P. Halpern, G. R. Hogsett, B. T. Straka, C. Arasmith, and J. McElroy
140 *A numerically intensive computing environment: IBM 3090 and the PS/2 Model 80*

Bala, G. P.
4 *FEM*vis: *An interactive visualization tool for mechanical analysis*

Barberi, F., R. Bernstein, M. T. Pareschi, and R. Santacroce
78 *Displaying morphological and lithological maps: A numerically intensive computing and visualization application*

Barnett, D. M.
108 see Williams, G. N.

Bello, S. E.
313 see Eichelberger, E. B.

Berbec, R. R.
653 see Ammann, E. M.

Bernaschi, M., E. Marinari, S. Patarnello, and S. Succi
254 *Three-dimensional visualization of many-body system dynamics*

Bernstein, R.
78 see Barberi, F.

Booth, R. C.
573 see Shea, D. G.

Boubez, T. I.
205 see Peskin, R. L.

Bozman, G. P., H. H. Ghannad, and E. D. Weinberger
815 *A trace-driven study of CMS file references*

Bozman, G.
653 see Ammann, E. M.

Briscolini, M. and P. Santangelo
119 *Animation of computer simulations of two-dimensional turbulence and three-dimensional flows*

Brown, D. H.
573 see Shea, D. G.

Bryant, R. M., H.-Y. Chang, and B. S. Rosenburg
617 *Operating system support for parallel programming on RP3*

Canetti, R., L. P. Fertig, S. A. Kravitz, D. Malki, R. Y. Pinter, S. Porat, and A. Teperman
727 *The parallel C (pC) programming language*

Chang, H.-Y.
617 see Bryant, R. M.

Charlebois, M. R.
382 see Turgeon, P. R.

Ching, W.-M. and D. Ju
767 *Execution of automatically parallelized APL programs on RP3*

Christidis, Z. D.
573 see Shea, D. G.

Chu, J. L., H. R. Torabi, and F. J. Towler
321 *A 128Kb CMOS static random-access memory*

Cohen, M. S. and K. S. Pennington
466 *Making negatives and plates for printing by electroerosion: I. Physical principles*

Cohen, M. S., A. Afzali, E. E. Simonyi, M. Desai, and K. S. Pennington
489 *Making negatives and plates for printing by electroerosion: II. Larger-scale fabrication and testing*

Cohen, M. S., A. Afzali, E. E. Simonyi, and K. S. Pennington
512 *Making negatives and plates for printing by electroerosion: III. Use of the direct negative and direct plate*

288 *Traffic studies of unbuffered Delta networks*

Hogsett, G. R.
140 see Arnold, R. F.

Hummel, S. F. and E. Schonberg
743 *Low-overhead scheduling of nested parallelism*

Imperato, M. A.
88 see Turtur, A.

Indyk, R. F.
330 see Knickerbocker, J. U.

Irvin, D. R.
805 *Monitoring the performance of commercial T1-rate transmission service*

Irwin, G. B.
573 see Shea, D. G.

Johnson, T. A. and D. J. Zukowski
707 *Waveform-relaxation-based circuit simulation on the Victor V256 parallel processor*

Ju, D.
767 see Ching, W.-M.

Kimelman, D. N. and T. A. Ngo
635 *The RP3 program visualization environment*

Knickerbocker, J. U., G. B. Leung, W. R. Miller, S. P. Young, S. A. Sands, and R. F. Indyk
330 *IBM System/390 air-cooled alumina thermal conduction module*

Koyamada, K. and T. Nishio
12 *Volume visualization of 3D finite element method results*

Kravitz, S. A.
727 see Canetti, R.

Leung, G. B.
330 see Knickerbocker, J. U.

Linton, T. D., Jr.
26 see Farrell, E. J.

Loiodice, C.
167 see Piccolo, F.

Lorie, R. A., J.-J. Daudenarde, J. W. Stamos, and H. C. Young
681 *Exploring database parallelism in a message-passing multiprocessor*

Malki, D.
727 see Canetti, R.

Mandelbrot, B. B.
535 see Musgrave, F. K.

Marinari, E.
254 see Bernaschi, M.

McElroy, J.
140 see Arnold, R. F.

Miller, W. R.
330 see Knickerbocker, J. U.

Moini, S.
156 *Application of visualization tools in solid mechanics*

Moriwaki, A.
591 see Shimizu, S.

Murakami, T. T.
573 see Shea, D. G.

Musgrave, F. K. and B. B. Mandelbrot
535 *The art of fractal landscapes*

Naik, V. K.
573 see Shea, D. G.

Nakada, T.
591 see Shimizu, S.

Nelson, E. L.
108 see Williams, G. N.

Ngo, T. A.
635 see Kimelman, D. N.

Nishio, T.
12 see Koyamada, K.

Ohara, M.
591 see Shimizu, S.

Oba, N.
591 see Shimizu, S.

Paolini, G. V. and P. Santangelo
231 *An interactive graphic tool to plot the structure of large sparse matrices*

Pareschi, M. T.
78 see Barberi, F.

Parmley, K.
108 see Williams, G. N.

Patarnello, S.
254 see Bernaschi, M.

Pennington, K. S.
458 *Making negatives and plates for printing by electroerosion: Introduction and overview*

Pennington, K. S.
466 see Cohen, M. S.

Pennington, K. S.
489 see Cohen, M. S.

Pennington, K. S.
512 see Cohen, M. S.

Pershing, J. A., Jr.
653 see Ammann, E. M.

Peskin, R. L., S. S. Walther, A. M. Froncioni, and T. I. Boubez
205 *Interactive Quantitative Visualization*

Piccolo, F., V. Zecca, A. Grimaudo, and C. Loiodice
167 *Graphic workstations and supercomputers: An integrated environment for simulation of fluid dynamics problems*

Pickover, C. A.
227 *Picturing randomness on a graphics supercomputer*

Pinter, R. Y.
727 see Canetti, R.

Porat, S.
727 see Canetti, R.

Prampolini, F.
88 see Turtur, A.

Reuter, R., U. Scharffenberger, and J. Schüle
697 *Multiplication of a symmetric banded matrix by a vector on a vector multiprocessor computer*

Rheingans, P.
97 see Young, F. W.

Rizzolo, R. F.
342 see Gani, V. L.

Rosenburg, B. S.

270 see Szelényi, F.

Zukowski, D. J.
707 see Johnson, T. A.

Zukowski, D. J.
573 see Shea, D. G.

Subject index for papers in Volume 35

Each index entry below is accompanied by an author's name and a page number; the author index contains the title of the paper and the names of coauthors, if any. Communications are identified by (C).

Subject	Author	Page
APL		
Execution of automatically parallelized APL programs on RP3	Ching	767
Artificial intelligence		
Visualizing processes in neural networks	Wejchert	244
Built-in self-test (BIST)		
Enhanced self-test techniques for VLSI systems applied to the IBM Enterprise System/9000 Type 9121 processor	Sarma	390
C programming language		
The parallel C (pC) programming language	Canetti	727
Caches		
Design choices for the TOP-1 multiprocessor workstation	Shimizu	591
Operating system support for parallel programming on RP3	Bryant	617
Communications		
Monitoring the performance of commercial T1-rate transmission service	Irvin	805
Compilers		
Automatic partitioning of a program dependence graph into parallel tasks	Sarkar	779
Execution of automatically parallelized APL programs on RP3	Ching	767
The parallel C (pC) programming language	Canetti	727
Computer architecture		
Design and performance of the IBM Enterprise System/9000 Type 9121 Vector Facility	Slegel	367
IBM Enterprise System/9000 Type 9121 system controller and memory subsystem design	Curran	357
The IBM Enterprise System/9000 Type 9121 air-cooled processor	Hajek	307
Computer organization and design		
Clustering IBM Enterprise System/3090 computers for parallel execution of FORTRAN programs	Scarborough	667
Design choices for the TOP-1 multiprocessor workstation	Shimizu	591
Hierarchically interconnected multiprocessors	Franaszek	603
Operating system support for parallel programming on RP3	Bryant	617
The IBM Enterprise System/9000 Type 9121 air-cooled processor	Hajek	307
The IBM Victor V256 partitionable multiprocessor	Shea	573
The Parallel Processing Compute Server	Ammann	653
The RP3 program visualization environment	Kimelman	635
Two approaches to array fault tolerance in the IBM Enterprise System/9000 Type 9121 processor	Turgeon	382
Computer performance analysis		
A trace-driven study of CMS file references	Bozman	815
Design and performance of the IBM Enterprise System/9000 Type 9121 Vector Facility	Slegel	367
Enhanced self-test techniques for VLSI systems applied to the IBM Enterprise System/9000 Type 9121 processor	Sarma	390
Visualizing parallel execution of FORTRAN programs	Szelényi	270

Computer-system availability
Two approaches to array fault tolerance in the IBM Enterprise System/9000 Type 9121 processor — Turgeon 382

Data transmission
Monitoring the performance of commercial T1-rate transmission service — Irvin 805

Design for testability
Enhanced self-test techniques for VLSI systems applied to the IBM Enterprise System/9000 Type 9121 processor — Sarma 390

Display technology
Data visualization using a general-purpose renderer — Doi 45
Displaying morphological and lithological maps: A numerically intensive computing and visualization application — Barberi 78
IDB: An image database system — Turtur 88
Interactive analysis of the topology of 4D vector fields — Dickinson 59
Picture processing and three-dimensional visualization of data from scanning tunneling and atomic force microscopy — Stoll 67
Volume visualization of 3D finite element method results — Koyamada 12

Electroerosion printing
Making negatives and plates for printing by electroerosion: Introduction and overview — Pennington 458
Making negatives and plates for printing by electroerosion: I. Physical principles — Cohen 466
Making negatives and plates for printing by electroerosion: II. Larger-scale fabrication and testing — Cohen 489
Making negatives and plates for printing by electroerosion: III. Use of the direct negative and direct plate — Cohen 512

Fault tolerance
Two approaches to array fault tolerance in the IBM Enterprise System/9000 Type 9121 processor — Turgeon 382

Field-effect transistors
Visual interpretation of multidimensional computations and transistor design — Farrell 26

Finite element analysis
FEM*vis*: An interactive visualization tool for mechanical analysis — Bala 4
Volume visualization of 3D finite element method results — Koyamada 12

Fluid dynamics
Animation of computer simulations of two-dimensional turbulence and three-dimensional flows — Briscolini 119
Graphic workstations and supercomputers: An integrated environment for simulation of fluid dynamics problems — Piccolo 167

FORTRAN
Clustering IBM Enterprise System/3090 computers for parallel execution of FORTRAN programs — Scarborough 667
The Parallel Processing Compute Server — Ammann 653

Fractals
The art of fractal landscapes — Musgrave 535

Graphics
Picturing randomness on a graphics supercomputer — Pickover 227
The art of fractal landscapes — Musgrave 535
The RP3 program visualization environment — Kimelman 635

Image processing
A numerically intensive computing environment: IBM 3090 and the PS/2 Model 80 — Arnold 140
An interactive graphic tool to plot the structure of large sparse matrices — Paolini 231
Animation of computer simulations of two-dimensional turbulence and three-dimensional flows — Briscolini 119
Application of visualization tools in solid mechanics — Moini 156
Correlative visualization techniques for multidimensional data — Treinish 184
Data visualization using a general-purpose renderer — Doi 45
Displaying morphological and lithological maps: A numerically intensive computing and visualization application — Barberi 78
FEM*vis*: An interactive visualization tool for mechanical analysis — Bala 4
Graphic workstations and supercomputers: An integrated environment for simulation of fluid dynamics problems — Piccolo 167
IDB: An image database system — Turtur 88
Interactive analysis of the topology of 4D vector fields — Dickinson 59
Interactive Quantitative Visualization — Peskin 205
Picture processing and three-dimensional visualization of data from scanning tunneling and atomic force microscopy — Stoll 67
Picturing randomness on a graphics supercomputer — Pickover 227
The art of fractal landscapes — Musgrave 535
Three-dimensional visualization of many-body system dynamics — Bernaschi 254
Visual interpretation of multidimensional computations and transistor design — Farrell 26
Visualization in a VLSI design automation system — DeMaris 238
Visualization of molecular dynamics via ray-tracing and animation in a vectorized environment — Williams 108
Visualizing parallel execution of FORTRAN programs — Szelényi 270

Visualizing processes in neural networks — Wejchert 244
Visualizing structure in high-dimensional multivariate data — Young 97
Volume visualization of 3D finite element method results — Koyamada 12

Imaging
A 3072 × 32-stage TDI imaging device — Schlig 283

Integrated circuit design
A 128Kb CMOS static random-access memory — Chu 321
Visualization in a VLSI design automation system — DeMaris 238
Waveform-relaxation-based circuit simulation on the Victor V256 parallel processor — Johnson 707

Logic
An adder design optimized for DCS logic — Weinberger 352
Differential current switch—High performance at low power — Eichelberger 313

Manufacturing
A 128Kb CMOS static random-access memory — Chu 321

Mathematical functions and techniques
Interactive analysis of the topology of 4D vector fields — Dickinson 59
Multiplication of a symmetric banded matrix by a vector on a vector multiprocessor computer — Reuter 697

Mechanical design
FEM*vis*: An interactive visualization tool for mechanical analysis — Bala 4
IBM System/390 air-cooled alumina thermal conduction module — Knickerbocker 330
Three-dimensional visualization of many-body system dynamics — Bernaschi 254
Volume visualization of 3D finite element method results — Koyamada 12

Metal films
Making negatives and plates for printing by electroerosion: Introduction and overview — Pennington 458
Making negatives and plates for printing by electroerosion: I. Physical principles — Cohen 466
Making negatives and plates for printing by electroerosion: II. Larger-scale fabrication and testing — Cohen 489
Making negatives and plates for printing by electroerosion: III. Use of the direct negative and direct plate — Cohen 512
Multiplication of a symmetric banded matrix by a vector on a vector multiprocessor computer — Reuter 697

Models and modeling
A numerically intensive computing environment: IBM 3090 and the PS/2 Model 80 — Arnold 140
An interactive graphic tool to plot the structure of large sparse matrices — Paolini 231
Animation of computer simulations of two-dimensional turbulence and three-dimensional flows — Briscolini 119
Application of visualization tools in solid mechanics — Moini 156
Correlative visualization techniques for multidimensional data — Treinish 184
Data visualization using a general-purpose renderer — Doi 45
Displaying morphological and lithological maps: A numerically intensive computing and visualization application — Barberi 78
FEM*vis*: An interactive visualization tool for mechanical analysis — Bala 4
Further results using the overhead model for parallel systems — Flatt 721
Graphic workstations and supercomputers: An integrated environment for simulation of fluid dynamics problems — Piccolo 167
Hierarchically interconnected multiprocessors — Franaszek 603
IDB: An image database system — Turtur 88
Interactive analysis of the topology of 4D vector fields — Dickinson 59
Interactive Quantitative Visualization — Peskin 205
Picture processing and three-dimensional visualization of data from scanning tunneling and atomic force microscopy — Stoll 67
Picturing randomness on a graphics supercomputer — Pickover 227
The art of fractal landscapes — Musgrave 535
Three-dimensional visualization of many-body system dynamics — Bernaschi 254
Traffic studies of unbuffered Delta networks — Heidelberger 288
Visual interpretation of multidimensional computations and transistor design — Farrell 26
Visualization in a VLSI design automation system — DeMaris 238
Visualization of molecular dynamics via ray-tracing and animation in a vectorized environment — Williams 108
Visualizing parallel execution of FORTRAN programs — Szelényi 270
Visualizing processes in neural networks — Wejchert 244
Visualizing structure in high-dimensional multivariate data — Young 97
Volume visualization of 3D finite element method results — Koyamada 12

Multilevel interconnections
IBM Enterprise System/9000 Type 9121 Model 320 air-cooled processor technology — Gani 342

Multiprocessors
Automatic partitioning of a program dependence graph into parallel tasks — Sarkar 779
Clustering IBM Enterprise System/3090 computers for parallel execution of FORTRAN programs — Scarborough 667
Design choices for the TOP-1 multiprocessor workstation — Shimizu 591

Execution of automatically parallelized APL programs on RP3 — Ching — 767
Exploring database parallelism in a message-passing multiprocessor — Lorie — 681
Further results using the overhead model for parallel systems — Flatt — 721
Hierarchically interconnected multiprocessors — Franaszek — 603
Low-overhead scheduling of nested parallelism — Hummel — 743
Multiplication of a symmetric banded matrix by a vector on a vector multiprocessor computer — Reuter — 697
Operating system support for parallel programming on RP3 — Bryant — 617
The IBM Victor V256 partitionable multiprocessor — Shea — 573
The parallel C (pC) programming language — Canetti — 727
The Parallel Processing Compute Server — Ammann — 653
The RP3 program visualization environment — Kimelman — 635
Waveform-relaxation-based circuit simulation on the Victor V256 parallel processor — Johnson — 707

Networks
Hierarchically interconnected multiprocessors — Franaszek — 603
Traffic studies of unbuffered Delta networks — Heidelberger — 288

Operating systems
Clustering IBM Enterprise System/3090 computers for parallel execution of FORTRAN programs — Scarborough — 667
Design choices for the TOP-1 multiprocessor workstation — Shimizu — 591
Low-overhead scheduling of nested parallelism — Hummel — 743
Operating system support for parallel programming on RP3 — Bryant — 617
The Parallel Processing Compute Server — Ammann — 653

Packaging
IBM Enterprise System/9000 Type 9121 Model 320 air-cooled processor technology — Gani — 342
IBM System/390 air-cooled alumina thermal conduction module — Knickerbocker — 330

Parallel processing
Automatic partitioning of a program dependence graph into parallel tasks — Sarkar — 779
Clustering IBM Enterprise System/3090 computers for parallel execution of FORTRAN programs — Scarborough — 667
Design and performance of the IBM Enterprise System/9000 Type 9121 Vector Facility — Slegel — 367
Design choices for the TOP-1 multiprocessor workstation — Shimizu — 591
Execution of automatically parallelized APL programs on RP3 — Ching — 767
Exploring database parallelism in a message-passing multiprocessor — Lorie — 681
Further results using the overhead model for parallel systems — Flatt — 721
Hierarchically interconnected multiprocessors — Franaszek — 603
Low-overhead scheduling of nested parallelism — Hummel — 743
Multiplication of a symmetric banded matrix by a vector on a vector multiprocessor computer — Reuter — 697
Operating system support for parallel programming on RP3 — Bryant — 617
The IBM Victor V256 partitionable multiprocessor — Shea — 573
The parallel C (pC) programming language — Canetti — 727
The Parallel Processing Compute Server — Ammann — 653
The RP3 program visualization environment — Kimelman — 635
Waveform-relaxation-based circuit simulation on the Victor V256 parallel processor — Johnson — 707

Performance measurement and prediction
A trace-driven study of CMS file references — Bozman — 815
Design and performance of the IBM Enterprise System/9000 Type 9121 Vector Facility — Slegel — 367
Further results using the overhead model for parallel systems — Flatt — 721
Hierarchically interconnected multiprocessors — Franaszek — 603
Low-overhead scheduling of nested parallelism — Hummel — 743
The IBM Victor V256 partitionable multiprocessor — Shea — 573
Traffic studies of unbuffered Delta networks — Heidelberger — 288

Printing technology
Making negatives and plates for printing by electroerosion: Introduction and overview — Pennington — 458
Making negatives and plates for printing by electroerosion: I. Physical principles — Cohen — 466
Making negatives and plates for printing by electroerosion: II. Larger-scale fabrication and testing — Cohen — 489
Making negatives and plates for printing by electroerosion: III. Use of the direct negative and direct plate — Cohen — 512

Program visualization
The RP3 program visualization environment — Kimelman — 635

Programming languages
Execution of automatically parallelized APL programs on RP3 — Ching — 767
Low-overhead scheduling of nested parallelism — Hummel — 743
The parallel C (pC) programming language — Canetti — 727

Relational databases
Exploring database parallelism in a message-passing multiprocessor — Lorie — 681

Semiconductor devices
Visual interpretation of multidimensional computations and transistor design — Farrell — 26

Semiconductor technology
A 128Kb CMOS static random-access memory — Chu 321
A 3072 × 32-stage TDI imaging device — Schlig 283
An adder design optimized for DCS logic — Weinberger 352
Differential current switch—High performance at low power — Eichelberger 313
Visual interpretation of multidimensional computations and transistor design — Farrell 26
Visualization in a VLSI design automation system — DeMaris 238

Simulation
A numerically intensive computing environment: IBM 3090 and the PS/2 Model 80 — Arnold 140
An interactive graphic tool to plot the structure of large sparse matrices — Paolini 231
Animation of computer simulations of two-dimensional turbulence and three-dimensional flows — Briscolini 119
Application of visualization tools in solid mechanics — Moini 156
Correlative visualization techniques for multidimensional data — Treinish 184
Data visualization using a general-purpose renderer — Doi 45
Displaying morphological and lithological maps: A numerically intensive computing and visualization application — Barberi 78
FEM*vis*: An interactive visualization tool for mechanical analysis — Bala 4
Graphic workstations and supercomputers: An integrated environment for simulation of fluid dynamics problems — Piccolo 167
IDB: An image database system — Turtur 88
Interactive analysis of the topology of 4D vector fields — Dickinson 59
Interactive Quantitative Visualization — Peskin 205
Picture processing and three-dimensional visualization of data from scanning tunneling and atomic force microscopy — Stoll 67
Picturing randomness on a graphics supercomputer — Pickover 227
The art of fractal landscapes — Musgrave 535
Three-dimensional visualization of many-body system dynamics — Bernaschi 254
Visual interpretation of multidimensional computations and transistor design — Farrell 26
Visualization in a VLSI design automation system — DeMaris 238
Visualization of molecular dynamics via ray-tracing and animation in a vectorized environment — Williams 108
Visualizing parallel execution of FORTRAN programs — Szelényi 270
Visualizing processes in neural networks — Wejchert 244
Visualizing structure in high-dimensional multivariate data — Young 97
Volume visualization of 3D finite element method results — Koyamada 12

Solid modeling
Application of visualization tools in solid mechanics — Moini 156
Data visualization using a general-purpose renderer — Doi 45
FEM*vis*: An interactive visualization tool for mechanical analysis — Bala 4
Visual interpretation of multidimensional computations and transistor design — Farrell 26
Volume visualization of 3D finite element method results — Koyamada 12

Systems architecture and development
Design and performance of the IBM Enterprise System/9000 Type 9121 Vector Facility — Slegel 367
IBM Enterprise System/9000 Type 9121 system controller and memory subsystem design — Curran 357
The IBM Enterprise System/9000 Type 9121 air-cooled processor — Hajek 307

Vector computers
Multiplication of a symmetric banded matrix by a vector on a vector multiprocessor computer — Reuter 697

VLSI
A 128Kb CMOS static random-access memory — Chu 321
IBM Enterprise System/9000 Type 9121 Model 320 air-cooled processor technology — Gani 342
Visualization in a VLSI design automation system — DeMaris 238
Waveform-relaxation-based circuit simulation on the Victor V256 parallel processor — Johnson 707
